

Contents

0.1	About this Book	9
0.2	Preface	9
1	Introduction	13
1.1	Introduction to the Concept of an IDE	14
1.1.1	IDEs are an Alternative to ODEs	15
1.1.2	An ODE with Bounded Periodic Solutions for which there is no IDE	18
1.1.3	The Origin of IDEs	19
1.1.4	The Problem of Complexity	19
1.1.5	The Hirsch Conjecture	21
1.1.6	Deriving IDEs from ODEs	21
1.2	Key Concepts	22
1.2.1	Defining <i>Form</i>	22
1.2.2	The Role of Morphology in The Theory of IDEs	23
1.3	How does the study of IDEs assist and advance the work of other scientific enterprises?	25
2	Notation, Special Functions and Concepts Used in this Book	27
2.1	Definitions and Notation	27
2.2	Transition Functions, Time-one Maps and First Return Maps	29
2.3	Special Functions Used in IDE Theory	31
2.4	Logic Gates	35
2.4.1	Algebraic Forms of Logical Operations	35
2.4.2	N-phase Gates	35
2.5	Visualization and Standardization	38
2.6	Lifting of Systems to Higher Dimensions	38
2.6.1	Lifting One-dimensional maps to \mathbb{R}^2	38
2.6.2	Lifting n-dimensional Maps to \mathbb{R}^{2n}	41
2.7	The Harmonic Oscillator as a Clock (HOC)	41
2.8	Canonical Almost Periodic IDE	43
2.9	Relationships Between Attractors, Non Invertibility, and Non Dissipative Maps	45
2.10	The Simplified Euler Fluid Flow Equation	46
2.11	The Matrix Operator Convention	47
3	Nonlinearity: Periodic Systems in Two Dimensions	49
3.1	The Twist Equation	51
3.1.1	The Discrete Twist and Flip Map	51
3.1.2	The Discrete Twist and Flip as a Time One Maps of an IDE	51
3.2	The Amplitude Equation	55
3.2.1	The Discrete Amplitude and Translate Map	55
3.2.2	The Discrete Amplitude Twist and Translate Map as a Time One Map of an IDE	56
3.3	The Jacobi Equation	58

3.3.1	The Discrete Chaotic Jacobi Map	58
3.3.2	The Discrete Chaotic Jacobi Map as a Time One map of an IDE	60
3.4	Nonlinear Orbits with Zero Divergence	62
3.4.1	A Discrete Chaotic Map with Nonlinear Orbits and Zero Divergence	62
3.4.2	The Discrete Chaotic Divergence Free Map as a Time One of an IDE	64
3.5	Nonzero Divergence with Nonlinear Orbits	64
3.5.1	The Discrete Chaotic Map with Positive Divergence and Nonlinear Orbits	64
3.5.2	The Discrete Chaotic Map with Nonzero Divergence as a Time One Map of an IDEs	65
4	Nonlinear Systems that are not Periodic	69
5	Elementary Connections between IDEs and Lie Groups	71
5.1	The IDE Analog of SO(2)	71
5.2	Extending Lie Concepts to IDEs	74
5.3	PDEs and Continuous Transformation Groups	76
5.3.1	IDEs and Integral Surfaces	76
6	The Geometric Dynamics of Complexity: Stretching and Folding	77
6.1	A Geometric Illustration of Stretching and Folding Using the Hénon Map	77
6.2	Geometric Illustration of Stretching and Folding Using the Twist and Flip IDE	81
6.3	Horseshoe Formation	83
6.4	The Classical Example: The Bakers Transformation	84
6.5	The Analytical View of Stretching and Folding	86
6.6	Formal Definition of Stretching	87
7	Chaos	91
7.1	Defining Chaos	91
7.2	Alternative Definitions of Chaos	91
7.3	Sensitive Dependence on Initial Conditions	92
7.4	Bernoulli Shifts	94
7.5	Definition of Chaos from Shifts	96
7.6	Functions of a Shift	99
7.6.1	Functions of a Shift from Well-known Functions	99
7.6.2	Noninvertible Maps of the Plane	102
7.7	Duplication Equations and Shifts	104
7.7.1	Power Series Solutions of Duplication Equations	106
7.7.2	Examples	107
7.7.3	Generalizations	108
7.8	Direct Treatment of the Continuous Case	110
7.8.1	Reduction to the Discrete Case	110
7.8.2	The Continuous Case	111
7.9	Representations of the Bilateral and Unilateral Shifts	111
7.9.1	Representation of the Cat map on the Torus as an IDE	113
7.9.2	Representations of the Bilateral and Unilateral Shifts	116
7.9.3	Representation of the Bilateral Shift as a Twist-and-dilation Map in the Plane	116
7.10	Bernoulli Chaos	118
7.10.1	The Bernoulli Map in \mathbb{R}^4	118
7.10.2	The Bernoulli map as a Time-One map	119
7.10.3	Cross products with Bernoulli systems	119
7.10.4	K-automorphisms	121
7.10.5	Gated compositions with Bernoulli systems	123
7.11	Weighted Averages Of Bernoulli and Almost Periodic Systems	124
7.11.1	Combining Bernoulli with Almost Periodic	125
7.11.2	Lifting \mathbf{B}_λ to \mathbf{F}_λ	126
7.11.3	Notes on \mathbf{F}_λ	127

7.11.4	The Code for F_λ	128
7.11.5	The Attractors of F_λ on the Two-dimensional Torus	129
7.11.6	Examples of F_λ Compared to Natural Processes	134
7.12	Generalized Shift	136
8	Chaos versus Complexity	139
8.1	Relationship of Three Properties of Complex Dynamical Systems	140
8.2	Autocorrelation and Chaos	140
8.3	EXAMPLE : ZA, SD, and EL without a Horseshoe	144
8.4	Complex dynamics from maps with zero Lyapunov exponents (LZ)	147
9	The Phenomena of Non-chaotic Strange Attractors	155
10	Boolean Complexity	163
10.1	Background	163
10.1.1	Notation	163
10.1.2	Construction of complex dynamics in high-dimensional spaces	165
10.2	Extensions to Finite Invariant Subsets with Integer Coordinates	168
10.3	Dynamics of Boolean Automata	168
10.4	Conway Dynamics	171
10.5	Stabilization Issues	173
10.6	Boolean Systems in IDEs	174
11	Almost Periodic Dynamics	175
11.1	Almost Periodic Complexity	175
11.2	Almost Periodic Forcing	179
11.3	Almost Periodic Dynamics versus Chaos	181
11.4	Almost Periodic Time Series	186
12	Functions of an IDE	195
13	Formal IDE Theory	197
13.1	Formal Definition of IDEs	197
13.2	Three Standard Forms of the IDE	197
13.3	Utility Lemmas, Propositions and Theorems	198
13.3.1	The Exponential Map	198
13.3.2	Standard Results	199
13.3.3	Utility Lemmas	201
13.3.4	Matrix Results	202
13.3.5	Peano's Theorem for IDEs	204
13.3.6	Irreducible IDEs	204
13.3.7	ODE Factorization Theory	205
13.3.8	Factorization Lemmas	205
13.3.9	Four Irreducible IDEs: The Twist, Shift, and two Dilation/ Contraction IDEs	206
13.3.10	Fundamental Theorems	208
13.3.11	The Convolution Theorem	211
13.4	First Order Theory	219
13.5	IDEs Derived from ODEs	220
13.5.1	Homogeneous Linear ODEs	220
13.5.2	Nonlinear ODEs	222
13.5.3	Non Autonomous IDEs	222
13.5.4	Periodic Coefficients	224
13.5.5	Perturbations of the Canonical IDE	224
13.5.6	Even and Odd IDEs	225
13.6	IDEs from ODEs where $\det(\mathbf{A}) = 0$	226
13.7	Two Fundamental IDE Theorems	226

13.8	Operator IDEs	228
13.9	Fusion Theory	229
13.10	The Array of IDEs	231
13.10.1	The Canonical IDE	231
13.10.2	The Elementary IDEs	233
13.10.3	Complex IDEs	233
13.11	The Algebra of IDEs	234
13.11.1	IDE Algebra	234
13.11.2	Basic Algebraic Relationships for Linear IDEs with Constant Coefficients	235
13.11.3	An Inventory of IDEs	236
13.11.4	IDEs from Elementary Functions	237
14	Solving IDEs	239
14.1	Decomposition of IDEs into Elementary Factors	239
14.2	Analytical Evaluation of the Exponential Function	240
14.3	Decomposition of Three-dimensional Matrices	243
14.4	Numerical Evaluation of the Exponential Function	243
14.4.1	Combing Analytical and Numerical Methods	244
14.4.2	Fusion Methods	245
14.4.3	IDEs and Continuous Transformation Groups	247
14.4.4	Partial Differential Equations	249
15	Calculus of IDEs	251
15.1	Infinite Series and Limits	251
15.2	The Vector Calculus of IDEs	253
15.2.1	Divergence and the Generalized Curl	253
15.3	IDEs are more General than ODEs	254
15.3.1	Generalizations of the Example	255
15.3.2	Using a First Integral as a Boundary Condition on the PDEs	256
15.4	The Method of Kryloff-Bogoliuboff	256
15.5	Embedding of a Diffeomorphism in an IDE	258
15.6	Numerical Approximation of IDEs	261
15.6.1	Data	261
15.6.2	ODEs	262
16	IDEs and Stochastic Processes	263
16.1	Randomness and IDEs	263
16.1.1	Basic Background on Probabilistic Concepts without Any Reference to Probability theory	263
16.1.2	A Discussion of the Concept of a Random Variable	266
16.2	Stochastic Processes from IDEs	267
16.2.1	The Chaotic Analog of a Uniform Random Variable	267
16.2.2	Generalized Chaotic Variables	270
16.2.3	Chaotic Variables, Chaotic Time-series, and Realizations of Chaotic or Stochastic Processes	270
16.3	Chaotic Analog of Stochastic Processes	272
16.4	Chaotic Analog of Brownian Motion	273
16.4.1	Amplitude Chaos and Brownian Motion	275
16.5	Other Stochastic Processes	275
16.5.1	Continuous Chaotic Processes	275
16.5.2	Wide-sense Stationary Processes and Chaos	276
16.5.3	Poisson Processes	276
16.5.4	Martingale and Markov Processes	277
16.6	Stochastic IDEs	277
16.6.1	IDEs and Brownian Motion	277
16.6.2	Relating Stochastic ODEs and IDEs	278
16.6.3	Implementation of a Stochastic IDE	280

16.7 Measurable IDEs	280
16.8 Ergodic Theory and Complexity	281
17 IDEs in Classical Systems	285
17.1 IDEs for Hénon, Chirikov, Gingerbread and Mandelbrot	285
17.1.1 The Chirikov IDE	285
17.1.2 The Gingerbread IDE	288
17.1.3 Mandelbrot Set IDE	288
17.2 Deriving IDEs from Classical Chaotic ODEs	289
17.2.1 Two-dimensional Nonautonomous Systems are Three or Four-dimensional Autonomous Systems	289
17.2.2 Ueda's Chaotic Attractor	290
17.2.3 The van der Pol Equation	292
17.2.4 Variation on the Double Pendulum	292
17.3 The Chua IDE	293
17.3.1 Numerical Derivation of the Chua IDE	293
17.3.2 Analytical Derivation of the Chua IDE	295
17.4 The Rössler IDE	297
17.4.1 Numerical Derivation of the Rössler IDE	297
17.4.2 Analytical Derivation of the Rössler IDE	301
17.5 The Lorenz IDE	302
17.5.1 Numerical Derivation of the Lorenz IDE	302
17.5.2 Analytical Derivation of the Lorenz IDE	306
17.6 The Vortex Attractor	307
17.6.1 The Theory	307
17.6.2 Derivation of the Vortex	307
17.6.3 Implementation of the Vortex	308
17.7 Violin Attractor	309
17.8 Single Scrolls and One-dimensional Maps	310
17.8.1 The Chua Single Scroll	310
17.8.2 One-dimensional Maps from the Single Scroll	314
17.8.3 Single Scrolls are General	314
17.8.4 The Three-dimensional Single Scroll	316
17.8.5 On Lifting a One-dimensional map to a Two-dimensional Map	322
18 Using IDE Theory to Construct and Model Complex Dynamics	325
18.1 Constructing Complex Dynamics from Variations on the Chua Double Scroll	325
18.2 The Compound Scroll	327
18.3 Trajectories of the Compound Scroll	328
18.4 Fixed Points of the Compound Scroll	331
18.4.1 Eigenvalues and the Discriminant	331
18.5 Example Analysis for $\omega \cdot h$ Small	333
18.5.1 The Divergence of V	334
18.5.2 The Generalized Curl of V	335
18.5.3 Rotation	335
18.6 Example PDEs	336
18.7 Scroll Analysis for a Specific Example	337
18.7.1 Simple Dynamics	338
18.7.2 Complex Dynamics	340
18.7.3 Simplifying Theorems	341
18.8 Complex Dynamics Using Nonlinear Rotation	343

19 Using IDEs to Study Dynamical Transitions Due to Stretching	345
19.1 Transitions of the Hénon IDE	345
19.1.1 The Hénon IDE	345
19.1.2 The Transitions from Infinitesimal to Discrete	346
19.2 Transitions of the Chua IDE	346
19.2.1 The Chua IDE	346
19.2.2 The Transitions from Infinitesimal to Discrete	349
19.3 Transitions of the Vortex IDE	349
19.3.1 The Vortex IDE	349
19.3.2 The Transitions from Infinitesimal to Discrete	349
20 Applications of IDE Theory: Neuroscience, Biology, Epidemiology, Sociology and Psychology	353
20.1 The KIII Neurodynamical Model	353
20.1.1 The Standard KIII model can be Reformulated as a Set of Infinitesimal Diffeomorphisms Equations (IDEs)	354
20.1.2 The Application of IDEs to K-neurodynamics may Result in Useful Simplifications of the ODEs Use to Describe the KIII System	355
20.1.3 The KIII-IDE Model can Provide a Reduction in Computation as well as Insights into the Neurodynamics	356
20.1.4 The Wave $\Psi(\mathbf{X})$ for any K model may arise from a partial differential equations that must be derived from experiment	359
20.2 Volterra-Lotka Prey Predator Model	361
20.2.1 Volterra-Lotka Periodic Model	361
20.2.2 Limited Growth V-L Model	362
20.2.3 Algebra of Limited Growth	364
20.2.4 Generalized V-L	367
20.3 Kermack-McKendrick (K-M): Epidemiology	369
20.4 Sociology of Groups	370
20.4.1 Competition Between Groups	370
20.4.2 Inner Group Attenuation Due to Cultural Friction	370
20.5 Psychology: Stress and Learning	370
20.5.1 The Impact of Stress on Performance	370
20.5.2 The Significance of Self Determination to Learning and Learning Rate	370
